ULTEM™ 9085 Resin

FDM® Thermoplastic Filament

Fit for High-Performance Applications

The information presented are typical values intended for reference and comparison purposes only. They should not be used for design specifications or quality control purposes.

Overview

ULTEM™ 9085 resin filament is a PEI (polyetherimide) thermoplastic FDM material. It features a high strength-to-weight ratio, high thermal and chemical resistance, and meets multiple aerospace and railway industry standards for flame, smoke and toxicity (FST) characteristics. Available colors are Natural, Black, Red, Jana White, White 7362, Dream Gray, Gunship Gray and Aircraft Gray.

ULTEM™ 9085 resin CG (Certified Grade - only available in Natural) meets more stringent test criteria and possesses documented traceability from filament back to raw material lot number. Included documentation:

- Certificate of Analysis — for both raw material and filament are supplied, documenting test results and identification to match filament manufacturing lot number to raw material batch number.
- Certificate of Conformance — confirms that the material is manufactured in compliance to approved Stratasys® and industry specifications.

Typical applications include production parts and functional prototypes.

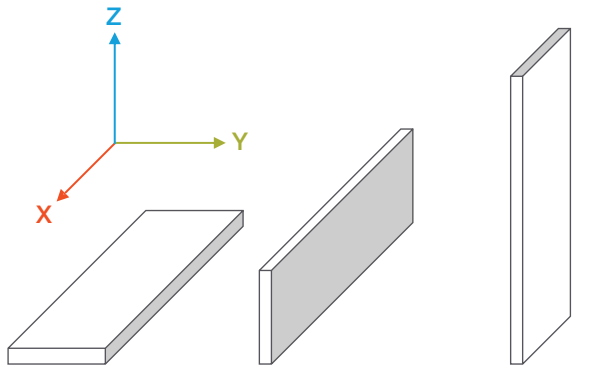
Mechanical Properties

Samples, natural and black, were printed with 0.254 mm (0.010 in.), 0.3302 mm (0.013 in.), and 0.508 mm (0.020 in.) layer heights on the F900 and Fortus 450mc. For the full test procedure please see the Stratasys Materials Test Procedure.

Print Orientation

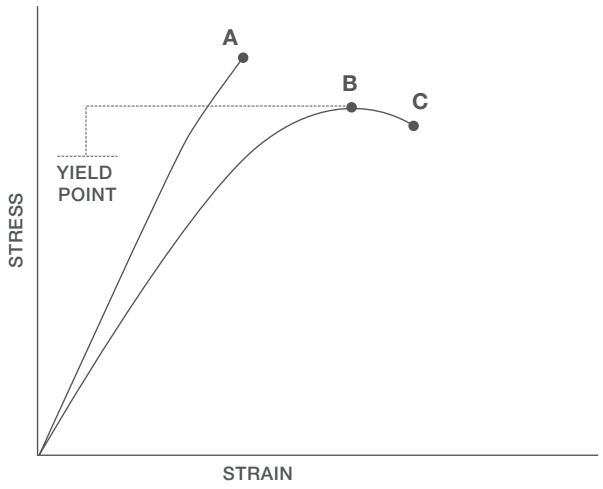
Parts created using FDM are anisotropic as a result of the printing process. Below is a reference of the different orientations used to characterize the material.



Flat (XY) On Edge (XZ) Upright (ZX)

Tensile Curves

Due to the anisotropic nature of FDM, tensile curves look different depending on orientation. Below is a guide of the two types of curves seen when printing tensile samples and what reported values mean.



A = Tensile at break, elongation at break (no yield point)

B = Tensile at yield, elongation at yield

C = Tensile at break, elongation at break

UV Aging

ULTEM™ 9085 resin was tested before and after UV exposure. Ten ASTM D638 upright (ZX) dogbones were tested in tensile after UV exposure and an additional 10 ASTM D638 ZX dogbones were the control (no UV exposure). The UV exposed samples were cycled in the QUV chamber per ASTM G154 (Standard Practice for Operation Fluorescent UV Light Apparatus for Exposure of Nonmetallic Materials) for 1,000 hours, alternating for eight hours at 60 ˚C (140 ˚F) and four hours at 50 ˚C (122 ˚F) with humidity and condensation. The increase in stress at break is from the control samples. For more information see the Impact of UV Exposure on FDM Materials white paper.

Performance at Temperature

ULTEM™ 9085 resin was tested at various temperatures. Ten ASTM D638 upright (ZX) T16 dogbone coupons were tested in tensile. The percent change from the reported room temperature results are listed below.
For more information, see the Impact of Temperature on High-Performance FDM Materials white paper.

ULTEM™ 9085 resin was tested for Flame, Smoke, and Toxicity (FST), Outgassing, NFPA 130, EN 45545-2, and UN ECE Regulation 118. These tests were done to show that ULTEM™ 9085 resin complies to the tested standard, not to show certification to any specific standard. It is suggested that additional testing be conducted if there are any questions about how ULTEM™ 9085 resin will perform for a specific part.

Flame, Smoke and Toxicity

ULTEM™ 9085 resin, natural (T20 tip and T16A tip) and black (T16 tip), were printed on the Stratasys F900 and tested per 14 CFR 25.853, BSS 7238 and 7239, and AITM 2.0007B and 3.0005. The testing establishes that this material meets requirements for:

- 60s and 12s Vertical Burn
- 15s Horizontal Burn
- Toxic Gas Emission
- Smoke Density
- Heat Release Rate of Cabin Materials

NFPA 130

ULTEM™ 9085 resin CG was printed with a T16A tip on the Stratasys F900 using single contour and +45/-45 solid rasters, which are typical default settings and tested per NFPA 130.

* It should be noted that products with other wall thicknesses and/or printed at different machines and with different settings (orientation/filling/tip size) may perform differently.
* Further testing should be done by the customer to make sure the material fits their final application.
